

# Virginia's Conservation Lands

February 2018

The Virginia DCR-Natural Heritage Program maintains data for all conserved lands in Virginia. These data are used to track state and regional land conservation goals, and for making local land conservation and land use decisions. In this map, all permanently conserved acres, up to December 20, 2017, were tallied in each jurisdiction. This allows a quick assessment of the distribution of conserved lands across the Commonwealth.
